

Emma is 44 years old, and had breast augmentation 6 months ago. This is her story:

When I went for my consultation with Mr Liew, I brought my padded bra and an evening dress that I never really filled. Mr Liew showed me two different implant sizes that he felt would suit my frame. I chose the 360cc implant he recommended, as these would give me the size that I normally achieve with a padded bra.

Day of surgery: I was not a bit nervous on my op day as I had every faith in Mr Liew. I woke up feeling groggy but no pain, more of a dull ache. Spent the day at the hospital propped up watching TV and chatting to my husband. That late afternoon Mr Liew came and checked on me and I went home that night. Slept well that night.

Day 1: Even though I was propped up in bed I still felt great. I had a lazy day at home with my husband waiting on me.

Day 2: I felt fine just couldn't lift my arms very much.

Day 3 onwards: I was out and about feeling fine wearing the support bra and my husband's shirt.

Day 10: I went back to the hospital and Mr Liew checked my wound. There were invisible dissolvable stitches and scars, which were small and very neat.

Day 11: We were off to Rome for 2 weeks. I felt great and was loving the results even though I was still wearing sports bras!

6 weeks after the op I was back playing golf and swimming and buying lots of new underwear. Thank you again Mr Liew for making me feel and look amazing. No more padded bras for me!
